## 1 The ER model

In the given project data, we firstly recognize 'area', 'artist' and 'genre' each as three individual entities **Each artist is from at most one area, so it's a many-to-one relation.** Several artists can belong to different genres and one genre can contain several artists. So **the relation between 'artist' and 'genre' is many-to-many.**

Secondly, we think about the relationship among 'release', 'recording', 'track' and 'medium'. We imagine a scene to describe these relations. The csv file of 'release' contains the names of releases. They could be stored in the mediums, such as CD, 12" Vinyl and so on. What's more, one release could have several CDs to contain many tracks, or in different medium (I'm not sure about this, but possible). So **the relation between 'release' and 'medium' is one-to-many.** Next, each track in different mediums must correspond to one recording. So **the relation between 'track' and 'recording' is many-to-one. Each 'track' must be in one of 'medium's. So the relation is many-to-one.** In addition, let's review the character of 'medium'. It could be a **relation between 'release' and 'track'.** Because the one release contains tracks by medium.

Finally, **the relation between 'artist' and 'track' is many-to-many.** Because many artists could participate together in one track. And many tracks(recordings) could be performed by the same artist.

We draw our ER model as below:

## 2 SQL commands

```

--ENTITY area
CREATE TABLE area (
    AID INTEGER,
    Aname CHAR(45),
    Atype CHAR(45),
    PRIMARY KEY (AID));

--ENTITY genre
--we don't need gcount in genre
CREATE TABLE genre (
    GID INTEGER,
    Gname CHAR(45),
    PRIMARY KEY (GID));

--ENTITY artist
CREATE TABLE artist (
    arID INTEGER,

```

```

name CHAR(45) NULL,
type CHAR(45) NULL,
gender CHAR(45) NULL,
PRIMARY KEY (arID));

--ENTITY recording
CREATE TABLE recording (
    RID INTEGER,
    Rname CHAR(45),
    Rlength CHAR(45),
    PRIMARY KEY (RID));

--ENTITY release
CREATE TABLE release (
    REID INTEGER,
    Relname CHAR(45),
    PRIMARY KEY (REID));

--ENTITY medium
CREATE TABLE medium (
    MID INTEGER,
    Mformat CHAR(45),
    release_REID INTEGER,
    PRIMARY KEY (MID));

--relationship track
CREATE TABLE track (
    TID INTEGER,
    position INTEGER,
    MID INTEGER,
    REID INTEGER,
    PRIMARY KEY (TID),
    UNIQUE(MID, REID),
    FOREIGN KEY (MID) from medium,
    FOREIGN KEY (REID) from release);

--RELATIONSHIP artist-area
CREATE TABLE artist-area (
    arID INTEGER NOT NULL,
    AID INTEGER,
    PRIMARY KEY (arID, AID),
    FOREIGN KEY (arID) REFERENCES artist,
    FOREIGN KEY (AID) REFERENCES area);

```

```
--RELATIONSHIP artist_genre
CREATE TABLE artist_genre (
    arID INTEGER NOT NULL,
    GID INTEGER NOT NULL,
    PRIMARY KEY (arID , GID) ,
    FOREIGN KEY (arID) REFERENCES artist ,
    FOREIGN KEY (GID) REFERENCES genre );

--RELATIONSHIP using
CREATE TABLE using(
    MID INTEGER,
    REID INTEGER,
    PRIMARY KEY (MID, REID) ,
    FOREIGN KEY (MID) REFERENCES media ,
    FOREIGN KEY (REID) REFERENCES recording );

--RELATIONSHIP artist_track
CREATE TABLE participate(
    arID INTEGER NOT NULL,
    TID INTEGER NOT NULL,
    PRIMARY KEY (arID , TID) ,
    FOREIGN KEY (arID) REFERENCES artist ,
    FOREIGN KEY (TID) REFERENCES track );
```
